

## 10. Digital Asset Listing Policy (Listing/Delisting)

This policy describes the governance criteria applied by EXCHANGE TECHNOLOGIES, S.A. DE C.V. for the admission, suspension, or definitive removal of tokenized assets on its trading exchange:

- **Specialization in RWAs (Real World Assets):** Unlike a traditional retail cryptocurrency exchange, Bitritm focuses on the design of a structured market for tokenized assets based on the real economy: bonds, shares (*Equity*), private debt, and Commodities.
- **Structuring and Advisory Service:** EXCHANGE TECHNOLOGIES, S.A. DE C.V. advises and guides the issuer in the drafting, technical formalization, and legal validation of the Relevant Information Document (RID or DIR) for compliance with the CNAD's public offering requirements.
- **Token Requirements:** For its listing, each digital instrument must undergo a rigorous financial, technical, and administrative analysis by a "Certifier" registered with the CNAD, and must be duly recorded in the Commission's Public Registry of Issuances.
- **Delisting Criteria:** The terms of use clarify that EXCHANGE TECHNOLOGIES, S.A. DE C.V. holds the unilateral authority to withdraw or suspend the trading of any token due to network maintenance, collateral liquidations, or regulatory changes, undertaking to give reasonable advance notice so that users may withdraw their tokens to external safeguarding wallets, except in the case of governmental mandates to freeze balances.
